DeepMind to integrate Gemini and [Gemini Robotics ER 1.6](#) into Orbit AIVI-Learning, allowing us to deliver a more sophisticated, intuitive, and powerful AI experience. Boston Dynamics Spot and Orbit now continuously learn about your facility with unprecedented depth, allowing for higher-order reasoning and more complex visual analysis.

Industrial environments are incredibly complex, and the assets you manage require more than just basic object recognition. We integrated Gemini into AIVI-Learning because modern facilities require industrial AI that can better reason and adapt for your sites.

Using AIVI to

Intelligence

AIVI-Learning delivers insights

you a holistic view of what is happening on your site. This allows you to accumulate value

Reduce fines, risk, and potential liability.

- **Asset Monitoring:** Perform inspections of key assets like conveyor belt damage, sight glass levels, and gauges to prevent critical failures on your site. Monitoring key assets prevents downtime.
- **Materials, 5S:** Identify material movement throughout a facility. Automate manual inspections previously conducted by multiple people across many shifts.

As your facility’s needs evolve, Orbit AI evolves with them. Because Gemini understands complex concepts right out of the gate, we can instantly roll out new, advanced capabilities. We’ve heard your requests, and we are excited to announce that AIVI-Learning now supports gauges

AIVI-Learning handles advanced concepts like gauge fullness from 0-100%, accurate

Massive Performance
Downtime Upgrades

detection, object presence, and sight glass readings. For key inspections, including digital display readings, accuracy will be significantly improved.

Furthermore, your system gets smarter behind the scenes with Zero-Downtime Upgrades. We continuously update and refine these sophisticated AI models in the cloud, meaning your inspection accuracy improves automatically without requiring your team to run manual Orbit software updates or schedule downtime.

Transparent Reasoning

Ever wonder how the AI arrives at its conclusions? Now you can look under the hood! AIVI prompts will now feature transparent reasoning, allowing you to see exactly how the model interprets your prompt and the logical steps it took to reach its final answer.

AIVI-Learning: Our Core Intelligent Tool for All Customers

AIVI-Learning is designed to be the ultimate visual inspection tool for your facility. We've made it easier than ever to access this advanced intelligence. Whether your Orbit deployment utilizes a Site Hub, Virtual Machine (VM), or Cloud hosting, you can access our servers to utilize these powerful AIVI-Learning models.

By utilizing AIVI-Learning, your facility unlocks access to specialized expert models that continually evolve. Trained on industrial data sets by the best researchers in the world, AIVI-Learning delivers true site-wide intelligence. It is necessary for specialized industrial inspections requiring complex logic, state analysis, and deeper asset classification. This means your fleet can effortlessly handle advanced tasks like 5S compliance audits, accurate pallet counting, measuring sight glass fullness, and reading analog gauges.

Data Privacy & Sharing

Q. Do I need to share data to use AIVI-Learning?

A. Yes, data sharing is required. AIVI-Learning is an expert suite of AI models designed to continuously learn and adapt to your specific facility. We require data sharing to train and improve the models that power the specialized, complex use cases.

Q. Who has access to my data?

A. Your data is **only** shared with

Looking Ahead

to this feature immediately when available!

This update specifically impacts customers currently utilizing AIVI-Learning. The transition to the Gemini-powered model is officially live for all customers enrolled with AIVI-Learning as of 04/08/2026!
